

Mac OS Installation Instructions

Install Java:

<https://www.oracle.com/java/technologies/downloads/>

Set environment path:

1- Open terminal

2- Type-> `cd ~`

3- Type-> `nano .zshrc`

4- Copy this text and paste it into the text editor:

```
export JAVA_HOME=/Library/Java/JavaVirtualMachines/zulu-8.jdk/Contents/Home/jre
```

5- Use “Control” and “X” to save. Click on “Y” and click on “Enter” to continue the saving process.

Install Maven:

1. Install homebrew:

1. Go to the <https://brew.sh> website to see the installation command.
2. Open terminal
3. Copy and paste this command from the brew.sh to install home-brew:

```
/bin/bash -c "$(curl -fsSL https://raw.githubusercontent.com/Homebrew/install/HEAD/install.sh)"
```

2. Install Maven with Home-brew:

Open terminal and type-> `brew install maven`

Install IntelliJ IDEA:

Go to the JetBrains website to download the community version:

<https://www.jetbrains.com/idea/download/#section=mac>
